

Photos Storyboard Overview

Blue = windows/screens, yellow = dialogs/popups, red = error messages

Login Screen

▼ User Login

User:

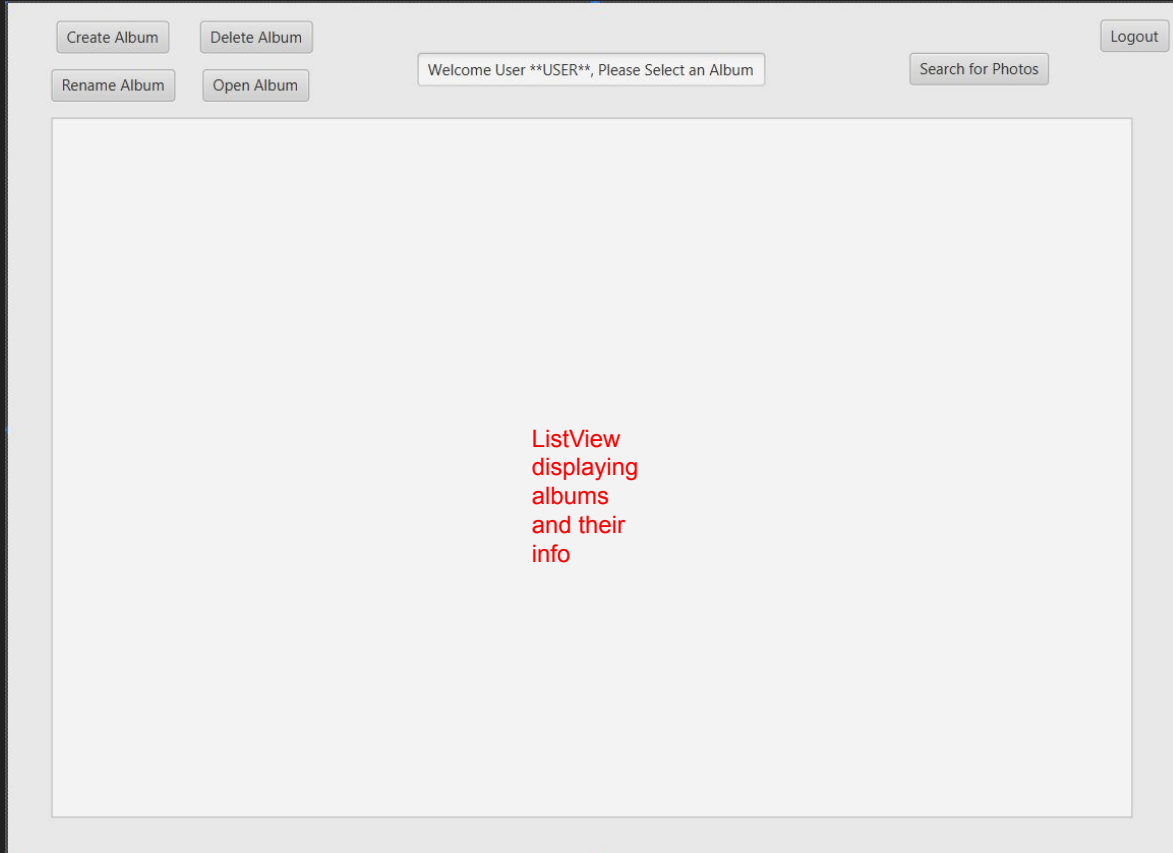

Login

TitledPane

- On start, login with user information. If the user inputs “admin” reroute accordingly otherwise route to regular album display
- Special user “stock” only used for importing stock photos but is otherwise treated as a regular user

User Albums Display

Buttons

The image shows a UI mockup for a 'User Albums Display' screen. At the top, there are five buttons: 'Create Album', 'Delete Album', 'Rename Album', 'Open Album', and 'Logout'. Below these buttons is a large white rectangular area representing a 'ListView'. Inside this area, the text 'Welcome User **USER**, Please Select an Album' is displayed. To the right of this text, there is a 'Search for Photos' button. The entire UI is set against a dark background.

Create Album Delete Album Logout

Rename Album Open Album

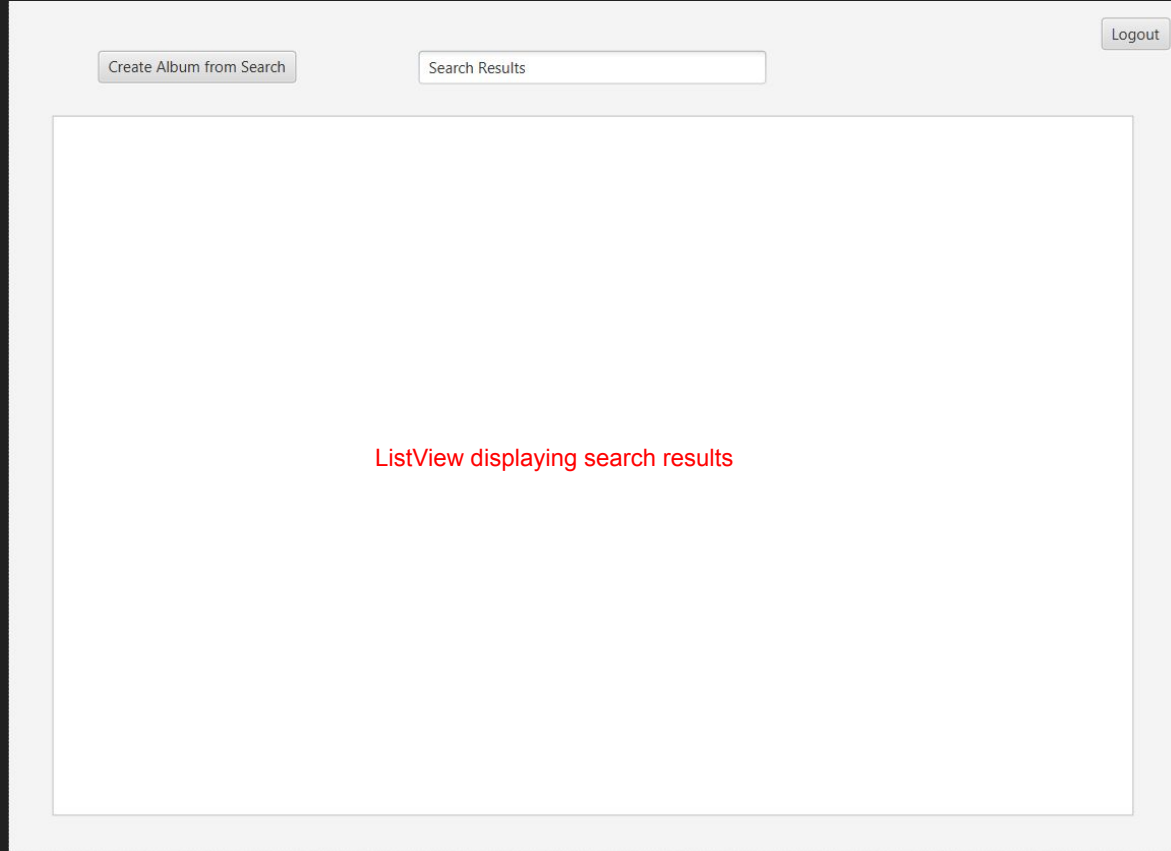

Welcome User **USER**, Please Select an Album Search for Photos

ListView displaying albums and their info

- Upon Login, The User is directed to the Albums Display screen, which puts everything together in an AnchorPane with a ListView and a few buttons. Each button is self explanatory on what it does and the middle TextField serves just to describe the current screen.
- By default, when no Album is selected, then Delete Album, Rename Album, and Open Album are disabled.
- Create Album will popup a dialog asking for album name only
- Searching for Photos will pop up a dialog that prompts the user to put in search parameters to redirect to a new window
- Clicking Logout will prompt the user to either log out or quit the program (safe exit)

Searched Photos Display

Buttons

- When photos are searched, the correct photos that matches the search parameters will be displayed in a ListView in a new window, with only a "Search Results" title and two functional buttons now to create a new album based on the results and logout.

Buttons

<<

>>

- When an Album is opened, a separate window will pop up displaying the photos in the current album. Most of the Buttons are self explanatory, each pulling up a dialog/new window for further action, and for now we are using a structure similar to our SongList project to get this part done, using a SplitPane for structure along with a ListView split and an ImageView split with details.
- User will be able to scroll through the photos by either clicking on the >>, << buttons or by using left/right arrow key
- Everything on the RHS is disabled until a photo is selected

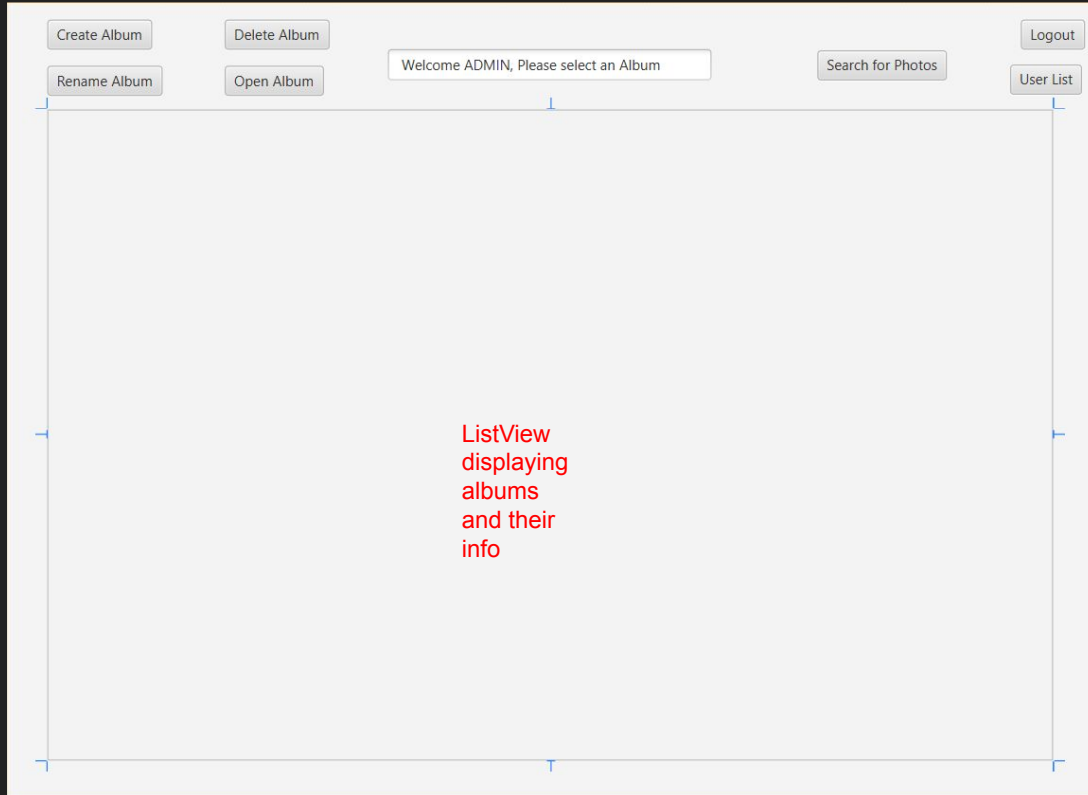

Move/Copy Photo

- Nothing too fancy, just a basic window using an AnchorPane, a ListView to display albums again, a TextField for title, and two buttons for confirming/cancelling
- Confirm Selection button will only be active once an album is selected.

Admin Albums Display

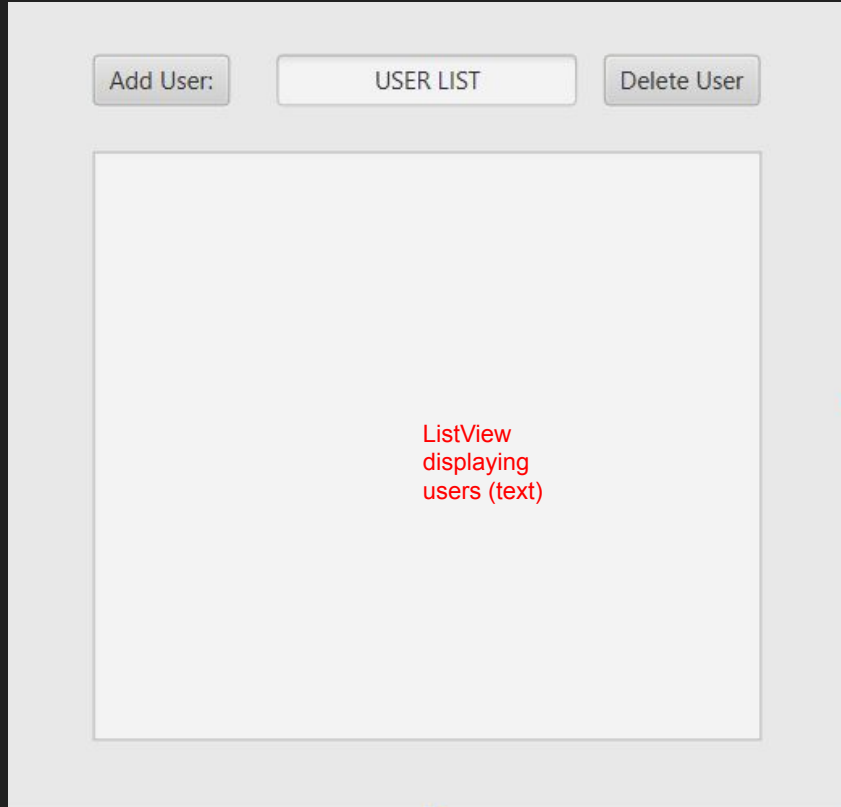

Buttons

- Sim. to User Albums Display. Only difference is an additional button being placed to pull up a userList, which pops up a new window displaying the list of all users

User List

Buttons

- Displays the list of existing users, sans stock and admin. Buttons are placed to add or delete users, with delete being disabled if no user is selected. Add User will pop up a window to add a user to the ListView.
